

Knowledge artifacts

knowledge artifacts
retrieval, entity, rule

knowledge representation
 $A = (a_1, \dots, a_n)$

Observable artifacts only.

representation

SC-FMA: representation layer

Dependency graph

artifact dependencies

annotation signal
+ structure

SCU calibration

artifact roles

calibrate priority
under fixed budget

audit record schema

audit budget

Knowledge maintenance

Knowledge audit records

artifact	role	audit reason	action
a3	gate	bottleneck	retain
a2	link	dependency	verify
a5	cluster	redundant	merge

record = artifact + role + maintenance action

knowledge audit record fields

annotation fidelity	structural role	redundancy	bottleneck	maintenance action
---------------------	-----------------	------------	------------	--------------------
